

# Solution For Acid Safety & Protection

INTRODUCING

## Neutralmat

- The mat's surface has our acid neutralizing technology which absorbs acid molecules and neutralizes them.
- A floormat designed for any space in chemical plants, labs & facilities where acids are present.
- It can be re-activated multiple times by washing the mat with our reactivation formula.

## ELIMINATING THE DANGERS OF ACID

Our mission is to protect people in industries – mining ore, advancing science, military, first responders, etc. – from being exposed to acids. Workers First has engineered a patented designer polymer that neutralizes acids on contact with a high reusability rate unlike current solutions that are “one and done.”

**"Workers First is creating products that will revolutionize personal protective equipment for employees working with acidic materials. Their product has the potential to set a new standard in worker protection in this vertical."**

— John Coniglio, Managing Director, OSEA
